President's Message...

Broadband Services has installed in the Mac Learning Center a coaxial cable connection in the wall near the copy machine, a Linksys router, and a Motorola cable modem in order to provide Internet access to the Mac Learning Center. We will no longer be sharing our Internet connection with the PC Club's Workshop and Learning Center. We just had to ask.

At home. One of my DVR's, Digital Video Recorders, recently had a hard drive hiccup. I could not play back any recorded shows. Before taking the box to the Broadband Services folks, I Google-searched for troubleshooting tips on the Motorola DCT6416 and came upon a short two-paragraph instruction on how to reformat the hard drive. Five key presses on the remote were required. It worked and yes, I lost the recorded shows.

My use of the DVR is such that I prefer not to watch live shows but instead watch the recorded playback. I discovered many other tips about the Motorola DVR and the Universal remote. I found a programming tip on how to fast-forward in 15 second jumps past the ads. Four quick consecutive presses on my customized button setting gets me back to the show. Saves time and increases enjoyment. Your homework assignment to to search for this topic.

This site explains why 'The Wall Street Journal's Web site is already (secretly) free' : <http://machinist.salon.com/blog/2008/03/21/wsj/index.html>
You must use the Firefox browser and install their referrer tool 'refspooof.' All the instructions are at the machinist site referenced above. What is happening is that you are telling the WSJ web site that you are coming from the digg.com website. The WSJ has been set up to allow subscription-free access for digg readers. Why? I do not know, but it may be related to web metrics such as page counts.

Cheers....Charles

PRESENTER
NAT CRAIG**

Nat grew up in Bakersfield. A close friend, who is a software engineer, exposed him to the Mac. He has been an Apple fan ever since. He has been using the Mac computer since OS 7 and has become proficient with Apple computers and products on many levels, from knowledge of the hardware to its operating system and creative software.

Nat moved down to Huntington Beach and completed graphic design classes at UCI, obtaining two certificates in Interactive Media.

After working as a freelance web designer and video editor for a few years, he moved to Ladera Ranch and started working at the Apple Store in Mission Viejo in April, 2006.

Loving interaction with other people, he worked as a Mac Specialist and often taught classes and gave personal One-to-One training sessions. He is also very involved with the Business Team at the store.

Last year he became a full Business Partner. Since then, he has been working closely with businesses in providing them with solutions to their needs on the Mac, partnering with Education institutions and taking the opportunity to teach classes when he can.

Here are the names of the three Door Prize winners of the May 8, 2008, General Meeting, in the order drawn. Each one won a \$25 gift card for an Apple Store.

Margot McCartney
Sheila Hirschberg
Howard Huang

Saving a Web Site as a PDF Document

Let's say you found a user guide online and would like to save it as a PDF document on your desktop for future reference. An easy way to accomplish this is to save the web site as a PDF document. Here are the steps involved:

1. Open the web page you wish to save as a PDF document.
2. From the File menu, select Print. This will display the Print dialog box.
3. Click the PDF button and select Save as PDF...

4. In the Save dialog box, name the document. For example: HP Printer C5280 User Guide.pdf.
5. Save it to the Desktop (press Command-D to select "Desktop") and click the Save button.

These steps will be reviewed in the next Email/Internet class.

Enjoy!
Anne Clark

Honorarium to Charles & Anne Clark

You two have collectively served as members of this club and on its Board in positions of leadership and responsibility longer than anyone during its 18-year history. Under your guidance, by applying your expertise to solving its technical challenges, actively participating in its many activities, and using your charm to resolve inharmonious personnel problems, it has matured--during your tenure---from a barely-solvent organization to a major community resource with a growing membership currently totaling almost 400 members.

In recognition of generously dedicating your talents and unrestricted time for the good of our MAC club the Board, on its own behalf and representing the overall Club membership wishes to present you this Honorarium. Hopefully it will enable you to replace the current worn-out, broken down, antique television in your bedroom with a current model of your choosing.

Continuing, more about... Pages

Today we are going to attempt to explain what the **Inspector** is about. When I first saw this feature in *Pages* my thoughts went immediately to Inspector Clouseau (Peter Sellers in the *Pink Panther* movies). And, as it seems, the bumbling and confusion that Peter experienced is not too far removed from using the *Pages* Inspector.

When you launch *Pages* and then open a blank or template page, you will find the Toolbar at the top of the window. And there you'll see the Inspector, ready for selection.

A single click on the Inspector icon presents a **dialog** window with ten buttons at the top. If you place the cursor over a button, wait a few moments, a **descriptor tag** pops up. If you click on a button the **related options** will appear for your selection & adjustment.

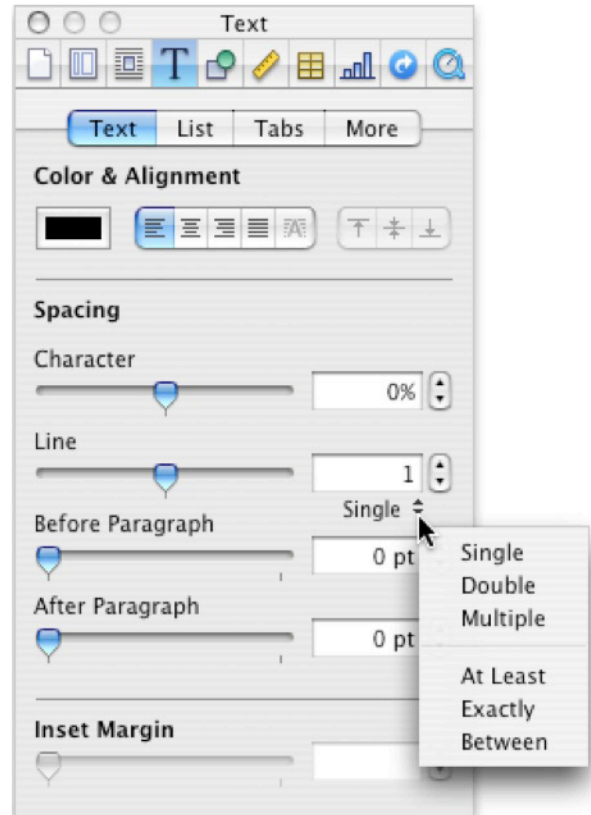

The ten buttons represent ten Inspectors:

Document	Metrics
Layout	Table
Wrap	Chart
Text	Link
Graphic	QuickTime

And these ten Inspectors offer you a total of about **165 different** setting options. Thank you Apple engineers... *call in Inspector Clouseau to help us learn and use them.*

Plus, we haven't yet talked about all the other items available on the Toolbar, some of which are also found in the Inspector.

So, for right now let us focus on just the **Text** part of the Inspector. Most of us will be using Word Processing and to know something about this **Text** will be helpful.

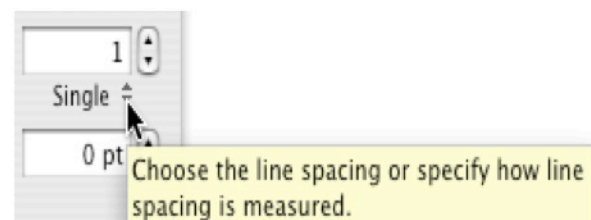

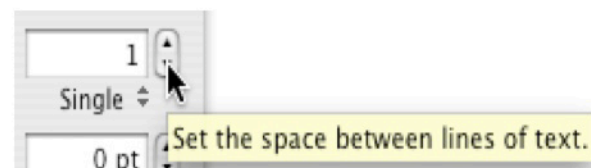

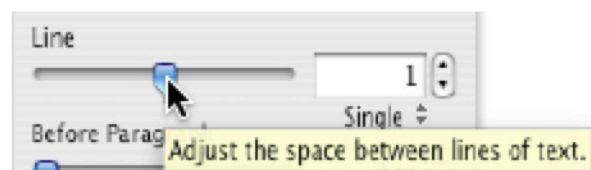

Near the top notice the **4 buttons**:

Text List Tabs More

To view text options the **Text button** should be highlighted. You can use the description tags to help understand what each item does.

These items, *with description tags*, show what you'll see when setting up text **line spacing**:
